Subject: May 1999 memo reviewing the possibility of combining treatment of waste water streams at Bunker Hill

In reading the ch2m memo, I wondering if we didn't ask the right question. The memo indicates the sending of the Publicly Owned sewage to the CTP was not a good thing to do and had plausible reasons. Maybe the precise question should be is it feasible to design a new facility to accommodate both the mine discharge with the Smelterville/Sewer District generated stuff?

I'll mention on the Monday call. The May memo maybe satisfactory, but would like to clarify.

STEVE: I'LL DROP OF A COPY THE MEMO THIS PM.
